

AUTHENTIC LANKA EXPORTS ERP

Login, Security & Role-Based Access Control: User Manual

Welcome to the Authentic Lanka Exports ERP (Manufacturing & Distribution) system. This user manual provides a comprehensive, part-by-part guide to logging in, security protocols, roles and permissions, personal account settings, and administrative user management.

1. Accessing the ERP & Logging In

Every user in the organization is given a unique set of credentials (an email address and password) to log into the ERP system securely.

Default Administrative Access Environment Details:

- URL: `https://export-lanka.netlify.app/`
- Initial Setup Email: `admin@admin.com`
- Initial Setup Password: `Admin123!`

Step-by-Step Login Procedure:

1. Open your web browser and navigate to the ERP login page URL listed above.
2. You will be greeted by the **Authentic Lanka Exports ERP Sign In** interface card.
3. **Email Address:** Enter the unique email address registered with your account (e.g., `user@example.com`).
4. **Password:** Enter your secret password.

TIP

You can click the **Eye icon** ( / ) on the right side of the password field to toggle the visibility of your characters to prevent typing mistakes.

5. Click the **Sign in** button.
6. Upon successful authentication, a greeting message will appear (e.g., *"Welcome back, [First Name]!"*) and you will automatically be redirected to the main system Dashboard.

IMPORTANT NOTE

If you have forgotten your password, please note there is no public self-service reset page available for security compliance. You must contact your system Administrator to have your password reset or changed.

2. Login Security & Attempt Restrictions

The system implements industry-standard security infrastructure layers to protect company data from unauthorized perimeter access:

A. Brute-Force Protection & Lockouts

- **Maximum Attempts:** You are allowed up to 5 failed login attempts (entering an incorrect password or unregistered email combination).
- **Remaining Attempts Warning:** Each time a login fails, the system displays an explicit error message informing you of the remaining attempts (e.g., "Invalid email or password. 4 attempt(s) remaining. ").
- **Lockout Duration:** If you fail to log in 5 consecutive times, the account is automatically locked by the security firewall for **15 minutes**.
- **Lockout Error:** Any subsequent login attempt made within the lockout period will show the message: "Account locked due to too many failed attempts. Try again in 15 minutes."

B. Account Deactivation

- If a team member leaves the company or has their access credentials suspended, an administrator will change their account status to **Inactive**.
- If you try to log into an inactive account, the system will instantly block the attempt and display the message: "Account is deactivated. Contact admin."

3. User Roles & Permission Levels

The ERP uses **Role-Based Access Control (RBAC)** to ensure that employees only access the specific information and features relevant to their explicit job roles. Permissions are predefined for each role but can be customized with user-specific overrides by an authorized administrator.

Detailed Role Descriptions

Super Admin / Admin

Scope: Complete, unrestricted control over the entire system.

Key Tasks: System setup, user registration, modifying permissions, configuring roles, viewing system logs, adjusting global configurations, and executing overrides (e.g., overriding credit limits on orders).

Warehouse Manager

Scope: Manages the storage facilities, catalog master-data, and inventory distribution flow.

Key Tasks: Creating and editing products, categories, brands, and Units of Measure (UOM); adjusting stock levels; performing stock transfers between warehouses; managing Goods Receipt Notes (GRNs); processing damaged items and supplier returns; viewing comprehensive inventory analytics.

Warehouse Staff

Scope: Practical day-to-day warehouse operations.

Key Tasks: Viewing stock levels, initiating warehouse stock transfers, processing inventory adjustments, recording Goods Receipt Notes (GRNs), and logging damaged inventory items.

Production Staff

Scope: Handles manufacturing processing lines and product recipe formulations.

Key Tasks: Viewing/creating Bills of Materials (BOM), managing and tracking production batches (Start/Complete batches), updating batch tracking status, and viewing production reports.

Sales Manager

Scope: Drives and oversees the organization's sales pipelines and customer commercial relationships.

Key Tasks: Creating, editing, and approving sales orders; overriding credit limits; managing customers and customer groups; accessing the POS (Point of Sale) module; issuing invoices, payments, credit notes, and customer returns; viewing extensive sales reports.

Sales Representative (Sales Rep)

Scope: Frontline customer relationship and transactional management.

Key Tasks: Creating and modifying sales orders, viewing product prices and live stock, managing customers, using the POS screen, generating invoices, collecting payments, and initiating customer returns. *(Cannot approve orders or override credit limits).*

Accountant

Scope: Financial ledger auditing and corporate reporting.

Key Tasks: Viewing invoices, bills, payments, and credit notes; recording customer payments and supplier bills; auditing sales and purchase orders; reviewing customer/supplier lists; accessing financial data records and sales reports.

Cashier

Scope: Point of Sale terminal operations.

Key Tasks: Accessing the POS system, viewing products and stock counts, creating and completing retail sales, printing customer invoices, and processing cash/card payments.

HR Manager

Scope: Human resources personnel management and payroll administration.

Key Tasks: Managing employee records, departments, designations, shifts, attendance sheets, and company holidays; approving or rejecting employee leave requests; setting up salary structures; generating and distributing payrolls; viewing HR data reports.

Employee (General Staff)

Scope: Dedicated self-service employee workspace.

Key Tasks: Viewing their own attendance logs, requesting leaves (and checking live leave balances), and viewing their salary slips/payroll documents.

The matrix below summarizes the functional authorization distribution across the system:

Module / Feature	Admin	Wh. Mgr	Sales Mgr	Accountant	HR Mgr	Sales Rep	Cashier	Wh. Staff	Prod. Staff	Employee
System Settings & Logs	Yes	No	No	No	No	No	No	No	No	No
User & Role Management	Yes	No	No	No	No	No	No	No	No	No
Product & Brand Setup	Yes	Yes	No	No	No	No	No	No	No	No
Stock Adjustments / Transfers	Yes	Yes	No	No	No	No	No	Yes	No	No
BOM & Production Batches	Yes	No	No	No	No	No	No	No	Yes	No
Sales Order Creation	Yes	No	Yes	View	No	Yes	Yes	No	No	No
Sales Order Approval	Yes	No	Yes	No	No	No	No	No	No	No
POS Terminal Access	Yes	No	Yes	No	No	Yes	Yes	No	No	No
Invoices & Payments	Yes	No	Yes	Yes	No	Yes	Yes	No	No	No
Employee & Payroll Mgmt.	Yes	No	No	No	Yes	No	No	No	No	No
View Own Payroll / Attendance	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

4. Personal Account Settings (Profile & Password Change)

Once logged into the ERP console, any employee can seamlessly manage their individual identity details and update their system password to comply with security policies.

A. Updating Personal Information

1. Click on the **User Profile** avatar/dropdown menu located in the top navigation header or sidebar panel and select **My Profile**.
2. Under the **Personal Information** dashboard card, you can modify:
 - First Name
 - Last Name
 - Phone Number

NOTICE

Your corporate email address is uniquely bound to your login routing ID and is completely read-only. If your email requires changes, file a request ticket with an Admin.

3. Click the **Save Profile** button to commit the updates to the master server database.

B. Changing Your Password

For company security compliance, you should change your password regularly:

1. Navigate to the **My Profile** workspace screen.
2. Locate the **Password & Security** panel and click the **Change Password** button.
3. Completely fill out the three mandatory validation fields:
 - **Current Password:** Type your active current password to verify identity.
 - **New Password:** Enter your new complex alphanumeric password (minimum 8 characters).
 - **Confirm New Password:** Re-type the exact new password again to guarantee spelling accuracy.
4. Click the **Update Password** confirmation button.
5. If successful, a confirmation green notification block will state: "Password changed successfully" and the edit form will automatically dismiss.

5. Administrator Instructions (Managing User Logins)

Privileged users with the explicit **Admin** or **Super Admin** role have total authority to manage the structural lifecycle of organizational team accounts.

A. Creating a New User (Adding a Team Member)

1. Navigate to the dedicated **Users** module section via the primary navigation sidebar menu.
2. Click the **+ Add User** button positioned at the top right of the master table display.
3. Fill out the standardized user registration database fields:
 - First Name & Last Name
 - Email: Enter a valid, unique business email. This functions as their unique system login username ID.
 - Phone (Optional input field)
 - Role: Assign their primary functional job profile designation from the dropdown index list (e.g., *Warehouse Manager, Accountant*, etc.).
 - Input a complex initial temporary password string.
4. Click **Submit** or **Save** to register the account.

SECURITY TIP

Share this initial temporary password securely with the new employee through protected internal channels. They must be instructed to update it immediately upon their first successful system login session via the *My Profile* panel.

B. Activating or Deactivating a User

1. Locate the target team member row directly inside the master user database data table.

2. If you need to instantly suspend or permanently strip an employee's access, click the **Trash/Deactivate icon** (or choose the edit status toggle button) positioned directly adjacent to their file name.
3. Confirm the action prompt. The system will process the state change and instantly switch the visible account flag to an **Inactive** badge status.
4. To reverse or reactivate access, select the user's edit form file, check the **Active** checkbox field, and click save.

C. Monitoring User Activities

On the central Users management dashboard, system administrators can constantly monitor operations through three core visibility components:

- **Metrics Counter Cards:** Displays the live organization total counts across: *Total Registered Users*, *Active Sessions*, and *Inactive Accounts*.
- **Last Login Timestamp Column:** Displays the exact chronological timestamp date and time a user last successfully authenticated into the cloud system. Use this column data frequently to audit background active company sessions and easily pinpoint stale or unutilized developer accounts.
